Automatic WM Inventory Input

Create inventories digitally and efficiently – also offline

Starting Position

The annual inventory is prescribed by law and restricts enormously many companies. During the inventory many storage areas, which have to be inventoried, are closed for stock putaway and stock removal. Therefore, part of the regulated daily work of many companies cannot be performed. For this reason, it is necessary to make the inventories as efficient as possible. Not only the general time, required for the work, but also the number of the re-counts have to be minimized.

The SAP Standard Process

The standard processes in SAP ECC are designed in such a way that separate count lists could be printed out after the inventory so that the employees, working in the warehouse, would fill them in. After the counting has ended, some results are manually transferred in SAP. This approach is not only inefficient, but also unnecessarily time-consuming. Moreover, there are too many suppliers on the market, using mobile solutions for simplifying the inventory. A prerequisite for this process is substantial investment in hardware, software, licences, as well as a stable WLAN connection in the whole warehouse, which often comes along with additional expenses. The costs for such projects for mid-sized companies bear no relation to the expected benefits. What they need is a fast and simple solution, which could be realized without major investments.

Automatic WM Inventory Input by abilis

Our add-on gives you the opportunity to choose any storage areas and to create with a few clicks the count lists, belonging to those areas, in any size in CSV format so that you could be able to edit them in MS-Excel. The employees need just a tablet in order to record digitally the count results directly during the inventory. A WLAN-connection is, therefore, not required.

Your Benefits

☑ Process Simplification: One-time upload of all count results instead of printing and transferring to SAP

☑ Flexibility: Adjust the Excel lists individually to your demands

☑ Usable in offline mode: Unlike many mobile solutions, you do not need WLAN connection

☑ Error Minimization: Avoid clerical errors when transferring a wide range of data

☑ Time Saving: Automatic creation of the inventory documents, as well as a one-time upload of all count lists

☑ Personal contact person: Consulting and introduction to the system with a personal expert
