

Electronic Financial Reporting-Cockpit

Electronic tax balance sheet/Electronic Federal Gazette messages directly from SAP

Starting Position

Companies in Germany are obliged to send their financial accounts to the tax administration in a pre-defined form (taxonomy, XBRL-format). For this purpose, the relevant figures very often have to be extracted, adjusted, edited, and sent from the accounting system in a complicated way. This process is time consuming, only partially documented and is divided among many IT-applications and company functions (finance, tax, IT). Moreover, the content-related consistency of many messages is not secured.

Electronic Financial Reporting-Cockpit by abilis

The electronic financial reporting cockpit is the only solution available on the market, which gives you the opportunity to create, edit and send out directly in SAP all the relevant messages. The user will be guided through an intuitive, step-by-step process from the selection of the raw data to the sending of the messages. For this purpose, they don't even have to leave SAP.

Your Benefits

- ☑ Time saving: No manual editing of the appointments when scheduling the purchase requisition
- ☑ Error reduction: Exclusion of manual errors when scheduling the purchase requisition
- ☑ Control of the deliveries: Option for a selective distribution of the deliveries throughout the week
- ☑ Personal contact person: Consultation and implementation with your personal experts.
